

AYINDE PEROUZA

Trinidad and Tobago | 868.718.7205 | ayinde.perouza@gmail.com | LinkedIn.com

PROFESSIONAL SUMMARY

IT and cybersecurity professional with IT and cybersecurity professional with experience supporting enterprise infrastructure, identity and access administration, endpoint security, Microsoft 365, Active Directory, network troubleshooting, incident documentation, and SLA-driven technical support across multi-company environments. Skilled in reviewing Microsoft Defender and antivirus alerts, handling access control requests, troubleshooting endpoint and connectivity issues, and escalating security or infrastructure incidents with clear documentation. Brings hands-on cybersecurity project and CTF experience in security monitoring, vulnerability management, incident investigation, SIEM alert review, and Windows/Linux hardening.

CORE TECHNICAL SKILLS

Cybersecurity Operations: Security alert triage, Microsoft Defender monitoring, antivirus monitoring, incident documentation, IOC documentation, suspicious activity investigation, phishing analysis concepts, MITRE ATT&CK mapping, escalation handling, evidence-based reporting, security audit support.

Network & Infrastructure Security: LAN/WAN troubleshooting, DNS, DHCP, IP addressing, VPN concepts, firewall concepts, Fortinet environment exposure, network segmentation concepts, endpoint security, access control, secure configuration, service availability support.

Identity & Access Administration: Active Directory, Microsoft Entra ID, Microsoft 365 administration, user provisioning, onboarding/offboarding, password resets, group membership changes, mailbox/access requests, permissions management, least privilege concepts.

Systems Administration: Windows Server, Windows 10/11, Group Policy, DNS administration, DHCP, endpoint troubleshooting, printer support, remote desktop support, patching support, BitLocker concepts, backup/recovery concepts, baseline hardening.

Security Tools & Platforms: Microsoft Defender, Microsoft 365 Admin Center, Entra Admin Center, Splunk, Security Onion, Elastic Stack, Kibana, Wireshark, tcpdump, Nmap, PowerShell, Linux CLI, VirusTotal, YARA/Sigma/Snort concepts.

Documentation & Communication: SLA-based ticket management, technical documentation, incident notes, knowledge base/SOP support, stakeholder updates, vendor coordination, audit-ready documentation, customer-focused communication.

EDUCATION

BSc in Computer Science - London Metropolitan University | 2022

CERTIFICATIONS & CURRENT STUDY

- CompTIA CySA+ (CS0-003) – exam date 27th July 2026
- Fortinet Certified Associate in Cybersecurity - 2025
- Microsoft Azure Fundamentals Internal Training - 2024
- Google Cybersecurity Professional Certificate - 2024
- ISC2 Certified in Cybersecurity (CC) - 2023
- EC-Council Network Defence Essentials (NDE) - 2023
- Cisco Junior Cybersecurity Analyst Career Path

PROFESSIONAL EXPERIENCE

Service Desk Analyst

Bermudez Group Limited | Oct 2023 - Present

- Support group IT operations across multiple business units by providing first- and second-level support for Microsoft 365, Active Directory, Entra ID, endpoints, printers, business applications, and user access issues.
- Administer identity and access requests, including user provisioning, onboarding/offboarding support, password resets, group membership changes, mailbox access, and permission updates following internal approval procedures.
- Monitor, review, and respond to endpoint and security-related alerts using Microsoft Defender and antivirus tools, escalating suspicious activity or unresolved incidents according to internal procedures.
- Troubleshoot authentication, email, device, software, connectivity, and endpoint issues while documenting actions, findings, resolution steps, and escalation notes in the service desk system.
- Support endpoint security and stability through patching support, antivirus checks, Microsoft Defender review, Group Policy-related troubleshooting, and secure workstation support.
- Coordinate with infrastructure teams, vendors, and business stakeholders during service interruptions, escalations, and project-related support tasks while maintaining SLA-focused communication.
- Assist with access control, endpoint readiness, application setup, and user validation to support business continuity and reduce onboarding delays.
- Maintain technical documentation, troubleshooting notes, and knowledge base information to support repeatable processes, audit readiness, and handover quality.
- Contribute to secure service desk operations by following escalation paths, validating access requests, documenting incidents, and supporting least privilege access practices.

FTTH Technical Support Technician, Tier 1 & Tier 2

Digicel Trinidad and Tobago Ltd. | Aug 2017 - Jun 2023

- Delivered high-volume client-facing technical support for broadband, VoIP, customer-premises equipment, and network service issues in an SLA-driven environment.
- Troubleshoot connectivity issues using IP addressing, DNS symptoms, modem/router status, signal/service validation, outage checks, and structured remote support procedures.

- Escalated complex incidents to network operations, field teams, and internal support groups with clear case notes, customer updates, and handover details.
- Supported recurring service-impacting issues by identifying patterns, documenting symptoms, and coordinating with internal teams to restore service.
- Built strong networking, communication, troubleshooting, and documentation skills directly relevant to infrastructure support and cybersecurity incident handling.

IT Technician

Matthews' Air Conditioning | Nov 2012 - Aug 2017

- Installed, configured, and supported desktops, laptops, printers, local applications, and basic network devices for business users.
- Performed first-line troubleshooting for hardware, software, connectivity, and peripheral issues.
- Maintained hardware/software inventory and documented recurring technical issues to improve support continuity.

KEY CYBERSECURITY PROJECTS

Level Effect Guardian Foundry PHANTOM CTI CTF - Supply Chain Incident Investigation - 2026

- Investigated a simulated supply-chain compromise involving a malicious npm package affecting a GitHub Actions self-hosted CI/CD runner.
- Traced activity from dependency compromise through payload execution, credential harvesting, network exfiltration, and GitHub-based secondary exfiltration.
- Documented attacker behavior, indicators of compromise, affected assets, remediation steps, and detection opportunities.
- Mapped observed behaviors to MITRE ATT&CK techniques and developed security-focused reporting suitable for incident response review.
- Practiced detection engineering concepts using YARA, Sigma, Snort-style detection logic, and threat hunting queries.
- Placed 4th out of 150 participants, demonstrating strong investigation, analysis, and reporting capability.

Windows Incident Response / DFIR CTF Challenge - 2026

- Completed a Windows incident investigation focused on identifying suspicious activity, reconstructing the attack timeline, and documenting the kill chain.
- Analyzed host-based artifacts, user activity, process execution indicators, and security-relevant evidence to support incident findings.
- Produced an incident report with executive summary, technical analysis, MITRE ATT&CK mapping, remediation steps, and detection recommendations.
- Practiced communicating technical findings in a format suitable for both security teams and business leadership.

Windows Enterprise Administration & Security Lab - 2025

- Built and administered a simulated enterprise Active Directory environment using Windows Server, DNS, DHCP, Group Policy, user/group management, and Windows client workstations.
- Built and documented a two-way transitive forest trust between TT.WI.LOCAL and BB.WI.LOCAL, including DNS remediation, reverse lookup validation, conditional forwarders, and trust verification.
- Validated cross-forest name resolution, trust relationships, and cross-domain authentication on Windows workstations.
- Implemented user provisioning, permissions management, helpdesk delegation, access control testing, and policy enforcement aligned with enterprise administration practices.
- Applied baseline hardening and configuration controls using Group Policy and documented security considerations such as least privilege, domain controller logon restrictions, and trust-change monitoring.
- Practiced troubleshooting DNS, authentication, logon rights, domain services, and endpoint connectivity in a lab environment.

Security Operations, Monitoring & Vulnerability Management Lab - 2025

- Configured and used Splunk, Security Onion, Elastic Stack, and Kibana to review security alerts, dashboards, network activity, and simulated security events.
- Investigated simulated malware, brute-force activity, suspicious logins, endpoint alerts, and network indicators using dashboards, custom alerts, and incident tracking workflows.
- Practiced SOC-style triage including alert review, evidence collection, IOC documentation, severity assessment, escalation decisions, and reporting.
- Used Wireshark and tcpdump to analyze packet captures, identify protocols, review DNS/HTTP activity, inspect User-Agent strings, and investigate suspicious traffic patterns.
- Performed hands-on vulnerability management labs using Splunk, Windows Group Policy, Linux automation concepts, and system administration tasks to support centralized logging, patch automation concepts, reporting, and attack surface reduction.
- Reviewed endpoint hardening, access control, logging, and patching concepts relevant to enterprise cybersecurity administration.
